

Node Guide: PDF(s) to MD(s)

Overview

The **PDF(s) to MD(s)** node is used to **bulk convert multiple PDF files into Markdown (MD) format**. Instead of converting just one file at a time, this node processes all PDF files inside a specified **source folder** and saves the converted Markdown files into a **destination folder**.

It is especially helpful when working with batches of documents that need to be transformed for use in other tools or outputs.

How It Works

When triggered:

- It looks inside the **source folder** you specify
 - Reads all the PDF files present in that folder
 - Converts each PDF into a Markdown file
 - Saves each Markdown file into the **destination folder**
-

Configuration Details

1. Source Folder ID

- Select the folder that contains the PDF files you want to convert
- The list of available folders will appear for selection
- All PDFs in this folder will be processed

2. Destination Folder ID

- Choose the folder where you want the converted Markdown files to be saved
 - The converted `.md` files will be created and stored here
-

Inputs

- **Folder ID (Source)**
 - Folder containing the PDFs to be converted
-

Outputs

- **Folder ID (Destination)**
 - Folder where all the converted Markdown files will be saved
-

When to Use

Use this node when:

- You need to convert **multiple PDF files at once**
 - You want to automate document processing or reporting
 - You need **Markdown versions** of PDFs for text-based outputs like chatbots, editors, or email content
-

Example Flow: Bulk Convert Reports

Scenario

You receive monthly reports as PDFs in a shared folder. You want to convert all of them into Markdown format for easier formatting and reuse.

Flow Steps

1. PDF(s) to MD(s) Node

- Source Folder: "Monthly Reports (PDF)"
- Destination Folder: "Monthly Reports (Markdown)"

2. Continue Flow

Use another node to process, notify, or archive the Markdown files as needed.

Summary of the Flow

- Converts all PDFs in one folder to Markdown format
- Saves them neatly in another folder
- Great for automation and handling documents in bulk
